

The Tech chronicle

It's Still Winter

Yeah, we get it, it's winter. It's cold. But so what? Explore the many activities in Michigan this month and see what's happening!

World of Winter Festival in downtown Grand Rapids - January 6, 2023 through March 5, 2023. World of Winter is the largest winter festival in the Midwest! See art, performances, play games and enjoy the downtown area. And it's free!

Winterfest at Pier Park, Grosse Pointe Farms, Saturday, January 14, 2023, 12:00 pm -4:00pm. Grosse Pointe Farms Pier Park is where you'll want to be for their yearly Winterfest! Petting farm, ice carving demonstrations, ice skating, food trucks, putt putt golf, live entertainment.

2023 Fire & Ice Festival in Downtown Rochester, Michigan is packed with family fun and festivities! On January 20-21, 2023, enjoy the ice sculptures along Main Street, ice skating rink, snowshoeing and cross-country skiing, fireworks, food trucks and tent, and so much more!

Tip-Up Town USA-Houghton Lake, MI, January 21, 22, 28, 2023 with the theme of Hollywood on Ice! Beverage tent, fishing contest, entertainment tent, carnival rides, petting zoo, antique snowmobiles, ice slide, vendors, snowmobile drag races and a Polar Bear Plunge!

Zehnders Snowfest in Frankenmuth, MI- January 25-29, 2023. Bring the whole family to enjoy snow sculpting and ice carving competitions. There will be a warming tent, entertainment, children's area and fireworks. This is one of our favorite January Michigan events and things to do in Michigan!

Did you Know?

The 19 chandeliers in the Capitol in Lansing are one of a kind and designed especially for the building by Tiffany's of New York. Weighing between 800-900 pounds apiece they are composed of copper, iron and pewter.

Prepare Your Business For A Successful 2023

With These 3 New Year's Tech Resolutions

If you don't have goals for 2023, there's no better time than the first month of the year to make them. Whether you want to increase sales, customer loyalty or another essential key performance indicator, you must be intentional about your resolutions. If you keep it vague, you probably won't achieve your goals, so you need to be specific and start small. From there, you can build on your foundation until you've reached your objective.

Thankfully, there are some great tech resolutions you can implement to help your business accomplish its yearly goals.

Improve Your Customer Experience
Does your business have a website? The answer for most companies is yes, but is your website actually driving any

sales? Do your customers enjoy the experience they gain from using your website? These are all questions you need to ask yourself because if you can answer no to any of them, then you need to reevaluate your website and digital customer experience.

If your business sells products, you must ensure the web pages are easy to navigate and the checkout process runs smoothly. If your business does not sell products online, utilize the space by writing and posting blogs to inform your clients about the industry or talk about events within your community.

Additionally, look into artificial intelligence chatbots if you don't already use them. Chatbots work around the clock to provide your customers with answers to their

Continued on pg.2

Continued from pg.1

questions about your business, products or services. Some chatbots are even capable of learning, allowing them to provide more personalized communication.

Invest In Cyber Security

Cyberthreats and attacks occur daily. While large businesses that get attacked garner a lot of attention, small businesses are at equal risk. You must do everything you can to protect your business and customers. This month, take some time to evaluate your cyber security practices and determine where you need to improve. If your hardware is old and outdated, it might be time to update. When your software informs you it needs to be updated, do not wait. Most of these software updates include patches to better protect you from new cyberthreats.

Possibly the most critical part of your cyber security plan needs to be employee education. Your entire team needs to know and fully understand your cyber security practices and why you have them in place. If you don't run your team through cyber security training at least once a year, 2023 is the time

to implement it. Make sure they know about password security, phishing scams, social media etiquette and the importance of protecting company and customer data.

Get Help With Your IT Needs By Hiring A Managed Services Provider

MSPs provide an excellent solution for small-business IT needs as they can handle everything behind the scenes, allowing you and your team to focus more on your important work. MSPs will take care of your data backup and disaster recovery, improve the quality of your computer systems and networks and ensure your team has all necessary software updates downloaded. MSPs can identify issues and fix problems before they become much more serious. Hiring an MSP is one of the few surefire ways to ensure your business stays protected from cybercriminals. And they've even become more affordable over the past few years. If you've been interested in hiring an MSP, there's no better time than the present. You'll be fulfilling a New Year's resolution while significantly improving and protecting your business.

The new year provides us with an opportunity to reset and refocus our attention back on improving our business. You have to make plans if you want to improve, though. Give some of these resolutions a try, and you'll quickly notice the benefits they bring to your business.

"Whether you want to increase sales, customer loyalty or another essential key performance indicator, you must be intentional about your resolutions."

Do You Safeguard Your Company's Data And Your Customers' Private Information BETTER THAN Equifax, Yahoo and Target Did?

If the answer is "NO" – and let's be honest, the answer *is* no – you are leaving yourself and your company open to massive liability, *millions* in fines and lost business, lawsuits, theft and so much more.

Why? Because you are a hacker's #1 target. They know you have access to financials, employee records, company data and all that juicy customer information – social security numbers, credit card numbers, birth dates, home addresses, e-mails, etc.

Don't kid yourself. Cybercriminals and hackers will stop at NOTHING to steal your credentials.

Why Not Take 4 Seconds Now To Protect Yourself, Protect Your Company And Protect Your Customers?

Our 100% FREE and 100% confidential, exclusive CEO Dark Web Scan is your first line of defense. To receive your report in just 24 hours, visit the link below and provide us with your name and company e-mail address. Hopefully it will be ALL CLEAR and you can breathe easy. If your company, your profits and your customers are AT RISK, we'll simply dig a little deeper to make sure you're protected.

Don't let this happen to you, your employees and your customers. *Reserve your exclusive CEO Dark Web Scan now!*

Ransomware Sucks

6 Things You Should Have Done to Stop Ransomware

Default Deny- Most employees use between 5-10 applications to perform their job functions. With that in mind, operating systems are pretty much left wide open, so any application, malicious or otherwise, can run, leaving your business vulnerable to zero-day or new trending malicious software, including ransomware. By not restricting what can run, you leave yourself exposed to vulnerabilities or the misuse of legitimate software. Antivirus software only attempts to block the bad stuff and oftentimes, it fails. If you start with a default-deny approach, any application will be blocked regardless of whether it is known or unknown malware.

Lock Down your Perimeter Firewall- Leaving ports such as RDP open on the internet is somewhat of a laughing matter on many Facebook groups, Discord channels, and other social platforms. Although, it is not so funny when you talk to businesses who have lost all of their data from a ransomware attack.

Restrict User Access- It is nice to trust that your employees will not do something bad, however, far too many companies have colossal file shares that anybody can access. Even if you trust your employees, restrict access to files and folders based on what they need to perform their job functions. If they do somehow manage to run ransomware, at least the damage will be restricted to what they can access.

Don't Just Look for Malware, Look for the Footholds- Antivirus software often focuses on searching for active malware, but far too often dead services or scheduled tasks are left dormant causing no harm until a set date and time. Use additional layers such as threat hunting to detect and remediate these threats.

Patch your Computers- This should not be up for debate. Patch your operating system and third-party applications. You can have the best security software in the world and at best, it will be 75% effective if your computers are not patched and up to date. I have seen far too many cases of old vulnerabilities like Eternal Blue used to create admin accounts on servers and push out ransomware. Patching is not optional!

Disable Macros- Macros were considered magic in the 1990's. We lived in a world of automatic documents and spreadsheets. Unfortunately, it wasn't long before attackers realized they could automate the same processes in order to attack our computers. In 2023, macros are seldom used, if you don't need them, disable them. You can disable macros by using Group Policy or manually on the computer.

We handle everything above and more for our clients with various tools. If you aren't a client of ours you should think about setting up a free meeting to discuss how we can protect your business with our security stack. Get ahold of us to setup a free cyber security review.

Become A Better Listener

To be a great leader, you need to have phenomenal listening skills. If you're a fantastic listener, hiring talented teams, leading people and closing on your big sales is more effortless. Listening might even be the most crucial skill for getting hired at your dream job and achieving career success.

Throughout my work, I've observed different degrees of listening skills. To be the best listener, you need to listen to the highest degree possible. Here are my five degrees of listening skills, listed from worst to best.

1. **Not Listening:** It's tough to listen when you are the one making all the sounds in a room. Don't be the one doing all the talking.
2. **Not Talking:** Your future boss may think you are not smart enough to keep up or you don't really care if you just sit there and don't talk.
3. **Nodding And Saying 'Mm-hm':** Oh, good, at least you're alive. But just nodding and making moaning noises is not super-insightful and does not build rapport.
4. **Reflecting On What You Heard:** If someone says, "Our growth strategy is primarily through international expansion," then a pure reflection would be to say, "So your growth strategy is international." Your future boss will say, "Yep," and will be only mildly impressed with you.
5. **Reflecting On The Emotion Behind The Statement:** Understanding why someone is saying something with a specific emotion can give you further

insight and the ability to read between the lines and give them a proper answer.

Here's an example. Imagine if your future boss just told you the industry is changing extremely fast and the company has been struggling to keep up. Degree 4 would be to say, "The industry is changing fast. The company has to change fast." This is child's play compared to Degree 5 listening.

Degree 5 listening would be something like, "It sounds like everything is changing so fast. It must be stressful keeping up."

Your future boss will say, "Yes, it is."

Then you add, "You need to count on your team and know they can keep up with the speed of change."

Your future boss will say, "Exactly." Once you first hear the word "exactly," the probability you will receive a job offer is at least 80%. That is because your future boss feels that you understand them, you care and you are the person to deliver them something good or remove something bad.

We seek safety with others. We need to know whether someone is an ally or an enemy. Reflecting on the emotion behind a statement can help leapfrog you right into "ally" mode with your future boss and get you your dream job.

Dr. Smart and his firm have published multiple New York Times bestsellers. He stays active in his community and has advised many government officials.

■ Turn Your Problem Employees Into Dedicated Team Members

As a business owner or leader, you will inevitably deal with a problem employee at some point in your career. They may have been an outstanding interviewee, but once they join the team, they're nothing but a source of drama or laziness. A problem employee can quickly reduce morale, productivity and even customer satisfaction scores. Many business leaders have wondered what the best approach is for handling a problem employee. While there's no guaranteed method since every situation is unique, there are a few things you can do to make discussions with problem employees as effective as possible.

Prepare Ahead Of Time. Discussing concerns with a problem employee isn't something you should do on the spur of the moment. Take some time to analyze their behavior, understand all perspectives of the situation and determine if the employee understands the problem with their behavior and if they know their expected level of service. If this is an initial conversation, reset the standard and see if they make any adjustments. If their behavior does not improve, you need to take further action.

Discipline Through Coaching. When you notice a problem, talk with the employee about it and devise a mutually agreed-upon solution. Focus on their performance issues, not anything personal. Give clear expectations and provide

ways for them to achieve their goals. You control this situation, so follow up when necessary.

■ How To Create More Meaningful Conversations

The best way to learn more about other people is by talking to them. Not everyone is a gifted conversationalist, though. When you struggle to hold conversations, you're less likely to build meaningful relationships or leave an impact on people. Thankfully, there is a foolproof way to improve your speaking skills. It all relates to the questions you ask.

When you meet someone new, how do you approach them? You probably ask, "How are you? What do you do? Where are you from?" While these questions help you understand basic information about someone, they won't produce a meaningful conversation. Instead, be more specific or intriguing with your questions. Try asking others, "What's your story? What do you consider a defining moment in your life? Why did you choose your line of work?" These questions will spark more conversation and make you appear more interesting. You can even use them while interviewing potential new hires to learn more about who they are.

"Looks like we're in for another extreme weather event."
